

Node.JS – HW – Access REST API

There is a json file (create it!) with movies names as follows:

```
{
  "movies" : [
    "Under the Dome",
    "Bitten",
    "True Detective",
    "Homeland"
  ]
}
```

You have a rest api service at <http://api.tvmaze.com/shows> with movies data

Create a function in utils module that finds the movies by their names pulled from the json file and overrides the json file the following movies data :

```
{
  "movies" : [
    {"name" : "Under the Dome", "premiered" : "2013-06-24" },
    {"name" : "Bitten", "premiered" : "2014-01-11" },
    {"name" : "True Detective", "premiered" : "2014-01-12" },
    {"name" : "Homeland", "premiered" : "2011-10-02" }
  ]
}
```
