Node.JS – HW – Access Files

2. Create a utils module with a function that receive a user id and returns an object with that use's pulled from the following json files

```
{
  "phones" : [
    {
      "userid" : 1,
      "phones" : ["054-444", "02-22222"]
    },
    {
      "userid" : 2,
      "phones" : ["052-444"]
    },
    {
      "userid" : 3,
      "phones" : ["050-9999", "03-33333"]
    }
  ]
}
```

```
{
  "users" : [
    {
      "id" : 1,
      "name" : "Avi Cohen"
    },
    {
      "id" : 2,
      "name" : "Dana Levy"
    },
    {
      "id" : 3,
      "name" : "Roee Gefen"
    }
  ]
}
```

Call the function from the main file and print the given result.
