Node.JS – HW – Authentication with JWT

You need to build a Web Site (Full Stack) for managing products only for authorized users . The Web Side composed from:

Back End

- Node.JS REST API server
- MongoDB data base with collections for products & users

Front End

3   HTML Pages:

1. Login Page (User & Password)
2. Products Page (a Table with all products)
3. Add/Update product (A form for adding new product OR update an existing one)

- Each client side page presents the user's User Name
- Pages 2 & 3 are accessible only for authenticated users
